

The Rising Sun™ Redbud

Cercis canadensis 'JN2' PP21451

If there was a way to bottle up sunshine and infuse it into a seed, the result would be The Rising Sun™ Redbud. This tree will continue to dazzle you through the season, starting with lush lavender blossoms in early spring, followed by a flush of orange and yellow new growth, fading into vibrant yellow and green mature foliage. This redbud has a very bright future your landscape...pun intended!
